Answer with at least 3 features in each section

	Urgent	**Not Urgent**
Important	**Do - (Your MVP)** ● Find and code in the list of 20 tickers for stocks ● Pull the data for each ticker from a free api ● Test factors like 60% payout ratio > safe. ● Do data cleaning and skip tikers with missing data rather than assuming ● Printing Raw Dataframe post data cleaning step to have some output that we can verify	**Schedule - (For V2.0+)** ● Using Multiple factors to draw a conclusion rather than just payout ratio ● Charts like estimated income based on path chosen in terms of risk ● The ability for users to use whatever stock tikers they want to check against these metrics. ● Exporting results and raw data
Not Important	**Delegate - (Use a library)** ● Getting the data for each ticker ● Table handling and data entry for chosen stocks would be done my pandas ● Web UI would be done by adapting	**Delete - (Cut it)** ● Any type of consultant looking at this data to provide their view ● ML forecasting based on historical data ● Mobile app
